Re: Qualification and Evaluation of Steel Fabricators

Dear Mr. Perez,

PCL Civil Constructors, Inc. built the I-91 Brattleboro Bridge, which opened to traffic in 2017. The bridge is in Brattleboro, VT and was named the #1 bridge under construction by Roads & Bridges magazine in 2014.

GSI Highway Products provided the elliptical tube traffic railing for this project. In total, over 2,100 LF of railing was supplied to the Brattleboro project. All material supplied was galvanized and then coated with a two-coat marine paint system.

Since the anchor bolts were already cast in the concrete barrier wall prior to the railing arriving onsite, it was critical that fabrication tolerances were achieved. In addition, PCL requested that the majority of the pieces be identical, requiring several shop drawing revisions and reviews. GSI was very cooperative and patient during this process. Lastly, because the railing required a paint system that was not standard in Vermont, GSI worked with the Owner (VTrans) to use products already available on their QPL list.

In all, GSI Highway Products provided a high quality product with on-time delivery and I would choose to partner with them again in the future.

Yours truly,

PCL Civil Constructors, Inc.

Jordan Robbins, P.E.
